

# THE WAR ON MITES

*Erik Raichle*

Family Band

Linda Band

Erik Raichle

Morristown Kids

Little Linda

Happy Helen

### About the Author

Mr. Erik Raichle graduated from the university with an English Teaching Degree and taught every grade from First Grade through Twelfth Grade in Pennsylvania, Dakato, Idaho, and Minnesota. He was also a writer for the Miami Daily News and thanks Bill Baggs and Damon Runyan Jr. for their help and inspiration.

In 1963, he married Jeanette Motz of Ellendale, Minnesota and together they had nine children and two family bands that traveled all over Minnesota, Iowa and Wisconsin. For 18 years, each child had a radio show on KRFO and KDHL. Some shows can be seen on **YouTube**, such as, Happy Helen's Polka Party and Little Linda's Polka Party.

For 30 years, he taught in Morristown, Minnesota, where his students sang for governors, produced record albums, published Minnesota's first elementary school newspaper, won the Minnesota state *School Patrol Award*. And, in 1986, his students won the *National Social Studies Olympiad* with the highest score ever recorded. In 1992 and 1998, he was listed in *Who's Who Among America's Teachers* and, in 1989, received the Minnesota Historical Society's *Teacher of Excellence Award*.

In 2012, he published *Yes, There Is A Santa Claus*, a holiday book that identifies Santa Claus.

In 2012, he uploaded 8 *YouTube* videos that show the virtual indestructibility of mites,

### [Dust Mites After 30 Minutes In Bleach](#)

In 2013, he wrote, *The Greeks Will Save Civilization, Again*, a children's book that will save civilization.

Illustrations by Donnie Ray Obina

Mites are over 400 million years old.

They cause severe suffering and death to all living things.

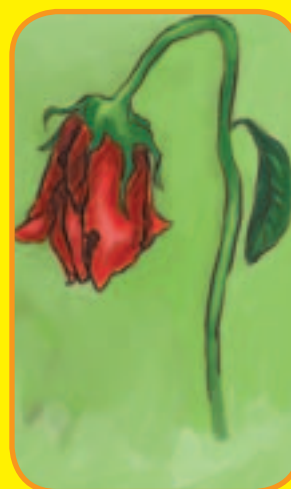

Mites carry bacteria, fungus, and virus that can kill you, such as,  
**Typhus**

Mites attack every part of our body:  
eyes, ears, hair, arms, legs, everywhere.

They cause infections and disease.

The longer we have them, the more  
they infest our body until they kill us.

People, who have these Mites, will have them until they die.

No one will help them.

- No medical or scientific organization will help them.
- No major Pest Control Company will help them.
- No medical or scientific research will help them..
- No laboratory or laboratory test will help them.
- No Miticide or Mite repellent will help them.
- No pharmaceutical company will help them.
- No hospital emergency room will help them.
- No health insurance company will help them
- No government agency will help them
- No doctor or scientist will help them.
- No Walk-In Clinic will help them.
- No Nurses Hotline will help them.
- No 911 paramedic will help them.
- No pharmacy will help them.
- No politician or political party will help them.

No one will help them because no one believes these Mites exist.

No one believes they exist because

1. **Doctors** tell us they **don't** exist. But, how do they know when they **don't** examine people with microscopes?
2. **Scientists** tell us they **don't** exist. But, how do they know when they're not allowed to examine people? They must refer the people to doctors.
3. **Psychiatrists** tell us they **don't** exist. But, how do they know when they're not allowed to examine people. They must refer the people to doctors.

As you can see,

Doctors and Scientists are not working together, using modern technology.

For this reason

- No one found these Mites. And, therefore, no one believes they exist.
- Psychiatrists were forced to call these people, **Psychotic**.
- Drug companies did not make a **Miticide** to kill these Mites in our home, nor a **Mite Repellent** to keep them off our body, nor a **Drug** to kill them inside our body, if they become parasites.

It's a vicious circle of *the blind leading the blind* with

**Dermatologists** leading the blind.

.....

America spends **trillions of dollars** on Health Care.

But, the **World Health Organization** ranks America 72nd in Health Care.

And, a major health insurance company says 50% of the money is wasted.

Even worse, our county, state, and federal departments of health are costly duplications of **backward, disconnected** health care services.

## Rationalized and Integrated

- **Rationalized** means doctors and scientists are using the latest technology.
- **Integrated** means doctors and scientists are connected and working together.

The following conversation shows how **backward** and **disconnected** they are. A man called the American Association of Doctors and asked the receptionist for a doctor who could treat a certain disease.

The receptionist replied, “We wouldn’t know that. We don’t list the diseases they treat. But, I can give you the numbers of three doctors in your area.”

The man said, “Well, it would be helpful to list what they treat on your website.”

She replied, “The list would be endless.”

He said, “Yes, but, if you listed the doctor and the diseases they treat in **Hypertext**, people could find the right doctor in minutes on the Internet.”

(Hypertext = **Link**)

She did not reply but gave him the names and numbers of 3 doctors in his area. He called them and none could treat the disease, nor did they know anyone who could.

Therefore, to cure people of these microscopic, biting mites, we must have

- Doctors, equipped to examine people, **microscopically**.
- Scientists, permitted to examine people, **microscopically**.
- Diagnostic Laboratories, equipped to test and examine people, **microscopically**.
- Drug Companies, to create drugs that kill these Mites. And,
- Medical and scientific systems that are rationalized and integrated, worldwide.

The best treatment for these Mites is a safe, oral drug that kills these Mites, **outside** and **inside** our body.

This treatment is best because it will help us to keep our belongings. Mites infest everything, especially, fabrics, such as, clothing, carpeting, drapes, furniture.

People who have asthma must throw away carpets, drapes, cloth furniture, etc.

Mites multiply rapidly and live for months. If we put things in storage and return a year later, the Mites will be there, biting us, killing our body, **inside** and **out**.

Good health is the most important thing in our life.

In 1937, a doctor said he couldn't see any bugs on people who said bugs were biting them. So, he called the people, **PSYCHOTIC**, and created a new disease called

## **Delusions of Parasitosis (DOP)**

Well, times have changed. Today, we can see these bugs with  
**Microscopes.**

In fact, in 2011, in a hospital laboratory,  
2 lab techs and 2 doctors, using a 1000x microscope, saw an **extraordinary** Mite.  
This Mite was **68 microns** and looked like a nimble spider.  
It was taken from a person's leg, with Sticky Tape.

The Mite is extraordinary because

- It's smaller than the smallest animal in the world.
- It looks like a spider with needle-like legs. Mites that small look like worms

Eriophyidae Mite, 125 microns  
The smallest animal in the world

But, the lab lost the specimen.

So, one doctor sent emails and made phone calls, asking for help. He wrote to

- county, state, and federal health departments
- pharmaceutical, medical and scientific companies
- America and Europe's top universities

He told everyone about the discovery of an extraordinary Mite.

But, these highly educated people in responsible positions either  
didn't know what to do, did not reply, denied it existed, or called it Psychotic.

To name a few, he contacted scientists at Ohio State, Penn State, Michigan State,  
Georgia State, Washington State, Iowa State, Arizona U, Florida State, UCLA.

One professor wrote back, "The human body is the most studied fauna on the  
planet. It's unlikely that such an animal exists."

Another professor said that his research found no such animal and stopped writing. One department head at the state department of health said it was possible. But, she had an important meeting to attend and hung up.

A veterinarian wrote, "...these people go from doctor to doctor, and, finally, they end up on my doorstep. And, I don't know what to do with them."

He talked with the Smithsonian, who sent him to the CDC, who sent him to a university entomologist, who sent him a paper on *Delusions of Parasitosis*.

He called the *NIH*, and they *Googled* a doctor in Arizona, who treats parasites. What?! *The National Institute of Health* **Googled** a doctor?! Now, that's bad.

We called one doctor, who is a parasitologist and understands our Medical System, perfectly. The doctor's wife is a nurse and answered the phone. She told us that her husband will talk with us for \$500 an hour, on the phone. And, they accept credit cards.

To name a few, he wrote to scientists at top universities in England, Netherlands, Germany, Denmark, Japan, India, Switzerland, Australia, New Zealand, and Thailand. The professor in Thailand expressed shock at the apathy, but didn't know what to do or where to send him.

He wrote letters and made phone calls to Pest Control Companies; Nurses Hotline; **county, state, and federal** departments of health; state and national congressmen; microscope and flow cytometer companies; medical and scientific organizations around the world. Many did not write back. Most said it was Psychosis. And, all went back to work and forgot about this extraordinary Mite.

## Why?!

Because the whole world is not **Rationalized** and **Integrated**.

**People don't know where to go or what to do.** So, they forgot about it.

The discovery of this extraordinary Mite is of great importance to world health.

Therefore, we need a

### **World Medical Research Center.**

We have the **computers**, the **programs**, the **Internet**.

We have the power to unite people everywhere.

So, if we really want to help people with health problems,

Let's

**unite, share information, and solve our problems.**

Below is an illustration of the Mite we saw in a hospital lab, in July 2011.

68 microns

In our system of government,  
People with the most votes, get the most help.  
This is the reason, people, with Biting Mites, get nothing.

So,

to help *everyone*, we must create a

**National Board of Medical Experts**

These Experts solve our medical problems, regardless of votes, because

They are **not** *elected* or *appointed*.

Instead, they are *hired*, **after** passing the

**American Civil Service Exam**

This exam identifies the best doctors in America.

These doctors check every bit of Health Care and

**Fast Track** the most important.

They know that Congress, to get votes, spends \$billions on a handful of diseases.

Half of that money is wasted.

Therefore, one of the first things The Board of Medical Experts create is

**The National Medical Research Center**

This research center connects people to everyone in Health Care,  
*doctors, hospitals, laboratories, health departments, governments.*

To do this,

the NMRC creates a **Website** with pages that help people solve their problems.

One of the web pages has a

**Disease Reporting Form**

It has **Drop-Down Windows** that list *symptoms, diseases, treatments, doctors*.

We begin by selecting Window 1 and complete each Window, through 4.

If we have trouble with a Window, we call the NMRC and a Tech helps us.

1	2	3	4
Symptoms	Disease	Treatment	Doctors

If America had this system, we could have cured these Biting Mites, years ago.

But, with our backward medical system, the only thing we get are

**slander, libel, and defamation**

To repeat, the problem with our medical system is our political system.

Whoever has the most votes, gets the most help.

Money, Power, and Votes are everything.

So, if we really want to help these people, we must connect with

Bankers, Politicians, and Special Interest Groups.

It's not reasonable, but it's America.

There's a difference between Medical Technology and Medical System.  
Our Medical Technology is awesome. From CAT scans to Transplants to Antibiotics, we  
are on the road to perfect health, for everyone.

But, our medical system delivers this technology to the American people,  
and this system is backward, disconnected, and expensive. Consider this:

Patient goes to doctor with sore throat → doctor sends patient to Lab →  
Lab reports *Streptococcus* → doctor looks up *Streptococcus* in Drug Book and writes  
prescription → patient takes prescription to pharmacy →  
doctor, pharmacy, and lab collect \$200 to \$500 for their services.

As you can see, these people are Techs. Anyone can do it.  
We need a *Smart Medical System*, regulated by the National Board of Medical Experts  
who fix prices and ensure the Competency and Integrity of the system.

In this system, we go online and connect with the NMRC web page → fill in the disease  
reporting form or talk with a Tech → identify our symptoms, disease, and possible tests  
and treatments → go to a nearby NMRC medical center for tests and treatment.

This system will speed up treatment and reduce costs, dramatically.

Once again, our Medical Technology is awesome. Our Medical System is stupid.

Insurance companies love our Medical System because it forces us to buy health insurance.  
One medical bill could wipe us out. This is another reason for The Board of Medical Experts.

## 1000x handheld digital microscope

We've uploaded eight Dust Mite videos to YouTube.

[Dust Mites After 30 Minutes In Bleach](#)

These videos show the virtual indestructibility of Mites,

**Scan QR Code to see YouTube video**

If we can make a car run thousands of miles,  
we can make a healthy body run for decades.

There's a reason our medical system is backward and disconnected.  
There's a reason Stem Cells are not in the news.  
America's ignorance of Stem Cells is astounding.

You see,  
A rich country with a backward medical system and a stupid government means  
someone's getting rich,  
Lenders make trillions, financing our health care system.  
Insurance and drug companies make billions.  
Health care providers make millions.

But, Stem Cells cure everyone of everything for almost nothing.  
As you can see, we have a problem. And, this is where  
The National Board of Medical Experts step in and fix the problem.

County, state, and federal health departments only treat diseases on a list.

Congress creates this list.

We have no research laboratories for diseases that are not on the list.

This is why Ebola and Zika caused so much panic and confusion. They were not on the list.

We had no money or laboratory for research. No one knew what to do

Congress had to add them to the list; then, **borrow** the money for research.

Lenders made a fortune. Half the money was wasted. Now, can you see our problem?

No one can take control and get the job done. We have to wait for Congress.

And, Congress has to wait for something to happen or for **citizens** to tell them what to do.

But, *Special Interest Groups and Corporations* also can tell Congress what to do.

And, since they have the most Votes and Money, Congress listens to them.

This is why people with these Biting Mites are not on the list: **No Money, No Votes.**

This is why we need a *National Board Of Medical Experts*.

### Patient's Lament

You're a backward, disconnected medical system, America.

You come in here to examine me for microscopic biting mites, but you have no microscope; no lab or clinic to refer me. You can't send me to your County, State, or Federal Health Departments because Mites are not on their list. And, you can't send me to a university scientist because they're not allowed to examine me. In fact, you have no idea how many people have these Mites because you have no national disease reporting system or research center where you can examine people

Your people don't know where to go, or what to do. They feel isolated.

You don't tell us what diseases your doctors treat – dermatologist is not a disease.

You don't tell us what medicines they use, or how successful is their treatment.

Maybe, WHO is right when they say,

**You're a Third World Medical System, America**

Whoever has the best health has the best life.

No one knows this until they lose it.

World famous psychiatrist  
Dr. Sigmund Freud

## Psychiatry

If Psychiatry did not exist, we would have to invent it.

Psychiatry explains abnormal behavior which has no medical or scientific proof.

For example, **Schizophrenia** has no medical or scientific proof.

We could compare Psychiatry to **Evidence** in a court room.

The prosecutor says, “We can’t prove you were at the scene of the crime, but, your finger prints, foot prints, and DNA were there.

Therefore, the **evidence** suggests you were at the scene of the crime.”

A Psychiatrist says, “We can’t prove you’re Psychotic, but, you talk with Napoleon; you think you’re Lord Nelson, and you act quite bizarre.

Therefore, the **symptoms** suggest you are Schizophrenic.”

But, because psychiatrists do not have scientific proof for the disease, they **vote** on the symptoms and put the winner in the **Psychiatrist’s Manual**.

As you can see, Psychiatry depends upon the facts of scientists and doctors.

If their facts are wrong, the disease will be wrong.

Well, this is what happened to **Delusions of Parasitosis**. The facts are wrong.

Doctors (**dermatologists**) did **not** use handheld microscopes to examine these people and did **not** see the Mites. So, they **falsely** reported the Mites did **not** exist.

This false report **forced** Psychiatrists to call these people, **Psychotic**.

Scientists (**entomologists**) used the combined reports of Dermatologists and Psychiatrists to say these Mites don’t exist, and to call these people, Psychotic, too.

As you can see, these people need our help.

They’re fighting an army of educated doctors and scientists, who are wrong.

## Symptoms for DELUSIONS OF PARASITOSIS (DOP)

1. Patient uses sharp objects to remove the Bugs from their skin.
2. Patient thinks their skin is infested with “Invisible” Bugs.
3. Patient is extreme in cleaning their house.
4. Patient discards belongings.
5. Patient abandons home.
6. Most patients are women.
7. Patient treats their skin with strong chemicals to kill the Bugs.
8. Most patients are middle-aged or older.
9. Patient refuses to believe it could be something else.
10. Patient is eager to show samples of bugs.
11. Folie à Deux, another person in the family gets the Bugs.
12. Patient can describe the life and behavior of the Bug, perfectly.
13. Patient has trouble sleeping at night.
14. Patient uses hallucinatory or amphetamine drugs.
15. Patient becomes socially isolated.
16. Patient thinks his dog or cat got it.
17. The Bugs persist for years.
18. Bugs usually come after some major event in the person’s life.
19. Patients come from any Socioeconomic or Educational level.
20. Patient loves to go “Doctor Shopping”.

The question is this,

If psychiatry created this list of symptoms; and if every doctor and scientist in the world knows about this list; then, that means thousands of people have these symptoms. It, also, means that doctors examined these people and found nothing. But, if doctors examined these people and found nothing, than, where are the Research Papers that prove the bugs **don’t** exist? Well, these Papers **don’t** exist, either, because **No one examined these people with a microscope.** Not surprisingly, for years, one of the symptoms for DOP was, **Patient feels invisible bugs crawling across their face.** Then, a university discovered a microscopic Mite (Demodex) that crawls across your face. So, they dropped that symptom from the list. Slick!!

So, when doctors and scientists tell us these Mites don't exist, we need to ask,  
“Then, why are all these people writing to Congress for help?”  
Actually, that's a great question. Why **are** these people writing to Congress?  
Congress doesn't know anything about medicine. The whole thing is stupid.  
We need a National Board of Medical Experts.

Petition

## Common Sense

### Criticism of the Symptoms

1. Probably a symptom.
2. Mites are microscopic. The human eye cannot see them.
3. Dust mites, scabies, and lice require extreme cleaning.
4. Mites multiply fast and get in fabrics. These fabrics must be removed.
5. No one helps these people. So, in desperation they move.
6. Not an abnormal behavior.
7. People become desperate because they have no repellent.
8. Not an abnormal behavior.
9. Not an abnormal reaction to a contradiction of truth.
10. Probably abnormal. Mites are microscopic. You can't see them.
11. Mites are contagious.
12. Probably a symptom.
13. Mites bite, even when we sleep.
14. Probably a symptom. Invisible bugs are famous among drug users.
15. Mites are contagious and force honorable people into isolation.
16. If we can get Mites from pets, then pets can get Mites from us.
17. With no help from anyone, this is very, very possible.
18. Not an abnormal behavior
19. Not an abnormal behavior
20. Our **disconnected** medical system, forces people to go shopping.

But,

If the symptoms are wrong, why do doctors and scientists believe them?

Why do doctors and scientists miss this wonderful opportunity  
to discover these mites and help people?

The answer is simple,

Our medical and scientific systems are not *rationalized* and *integrated*. And,

University doctors and scientists are

**Left Brainers**

## Left Brain/ Right Brain

The majority of university doctors and scientists are Left Brainers.

They're Book Smart, but lack, Common Sense (Street Smart).

They memorize and trust authority.

That's why they couldn't see that #6 in Delusions of Parasitosis is not a symptom.

Instead, they trusted the Psychiatrists Manual.

In fact,

- The faster a person rises in an institution, the more certain they're a Left Brainer.
- The higher they rise, the more certain they're a very intelligent Left Brainer.

As long as the facts are correct,

Left Brainers keep systems, organizations, and institutions in order.

That's their job.

But, then, along came the Right Brainers.

Right Brainers are constantly dreaming, questioning and tinkering with the system.

They trust no one, especially, those smug Left Brainers.

Right Brainers are the creators of civilization. They see relationships.

Newton, Archimedes, Edison, Einstein, and Tesla were Right Brainers.

Right Brainers create the systems and institutions that Left Brainers maintain.

Right Brainers discover laws of gravity; create light bulbs and rockets to the moon

In fact,

- The more a person dreams, questions, and tinkers with the system, the more certain they are a Right Brainer.
- The more successful their questioning, dreaming, and tinkering, the more certain they are a very intelligent Right Brainer.

Right Brainers do not like systems or institutions. They're free spirits who become

- Inventors
- Composers
- Authors
- Artists
- Self-employed
- People who follow their dreams.

As long as their tinkering is correct, Right Brainers lift us out of the jungle.

As long as their facts are correct, Left Brainers keep us out.

As you can see, we need them both.

So, when Right Brainers see all these people, pleading for help,  
they become suspicious, and their tinker instinct kicks in.  
They know institutions, worldwide, are Left Brainers.  
They know Left Brainers don't question authority and never say, Eureka!  
They know our Medical and Scientific systems are not Rationalized and Integrated.  
They know we don't have a National Medical Research Center to refer people.  
They know university Scientists are not permitted to examine people for Mites.  
They know doctors don't use the latest technology to examine people for Mites.  
They know these are the reasons biting Mites have not been discovered.  
They know all this confusion is the reason Psychiatrists are confused.

So, they look at this mess and say,

“Wow! What a mess! This looks like a job for Tinker Man.

“First,

“I'll tell doctors and scientists to use handheld microscopes to examine people.  
“I'll tell Psychiatrists to revise their Manual.  
“I'll equip and empower university scientists to examine people.  
“I'll petition congress to allocate money for this research.  
“I'll create a computer program that matches symptoms with disease.  
“I'll create a Miticide and Mite Repellant to help these people.  
“I'll reprimand all those doctors and scientists, who called these people, Psychotic.  
“And, finally, I'll **Rationalize** and **Integrate** our medical system.

Today,

Students go through grade school, high school, and 4 years of college.

Then, they apply for Medical School, which costs about \$200,000.

Med School is another 4 years of classrooms and work in a clinic (Internship).

After graduation, they take *United States Medical License Exam* and *Board Certification Exam*.

Finally, they apply for a *State Medical License*; then begin practicing medicine in that state.  
As you can see, it's a rich kid, Left Brainer system. Poor kids and Right Brainers are out of luck.

So, to Rationalize and Integrate our medical system,

I'll use

- psychometrics to identify talented students in grade school. Then, around age 11, I'll
- enroll these students into a specially designed Hospital Clinic course of study,
- track these students for competency and integrity; then,
- graduate them with a Master's Degree In Medical Science.
- With this degree, they can practice medicine, anywhere in the world. In fact, they will be the best doctors the world has ever seen, And, it won't cost the students a cent because I'll persuade taxpayers to pay the bill, which will be a fraction of what it costs today.

Finally, I'll build a National Medical Research Center (NMRC)

# THE NATIONAL MEDICAL RESEARCH CENTER NMRC

employs scientists and engineers to design and maintain the NMRC.

They use the latest technology to help people communicate with the NMRC:

Super Computers, Internet, Web Pages with Links

Touch Screen monitors, Webcams, Touch Screen Check Lists

Speech Recognition, Pattern Recognition, Special Keyboards,

Programs that match *symptoms* with *diseases and more....*

The NMRC lists **doctors** and the **diseases** they treat on a Web Page with Links.

Beside each disease are columns that list

- The number of patients the doctor treated for that disease.
- The treatment success rate.
- The Patients' rating of the doctor and the treatment.

<u>Doctor Smith</u>	Diseases	Patients Treated	Success	Patient Rating
	<u>Achalasia</u>	258	247	5 Star
	<u>Acid reflux</u>	124	103	5 Star
	<u>Anemia</u>	367	341	5 Star

### The NMRC operates like this,

1. People go to NMRC website and answer questions with a keyboard, etc.
2. NMRC analyzes the answers and sends new questions and a list of doctors.
3. Patient answers these questions and send it back. If everything matches, the
4. NMRC makes an appointment with a doctor and forwards the NMRC's evaluation.
5. Typically, the process takes minutes.
6. Patient arrives at the local NMRC hospital-clinic and is interviewed by a Tech, who has the NMRC sheet and a clinic questionnaire. After the interview,
7. The Tech combines the 2 forms and sends them to the NMRC.
8. NMRC processes the new information and creates another list of doctors and tests.
9. If the doctor and disease match, then, the patient meets with this doctor.
10. If, after the examination, this doctor can't help, he fills another NMRC form.
11. Ideally, this time, the NMRC will identify the disease and the correct doctor.
12. If not, then, the process continues until the illness and correct doctor are identified.
13. If NMRC cannot find the right doctor, then they send the patient to the NMRC Lab where scientists help them, with every available resource.
14. Patient ratings and comments are sent to the National Board of Medical Experts, who evaluate a doctor's Competency and Integrity.

## IQ

The Average American has an IQ of 90 to 95. Normal is 100.

This means that

158 million Americans do not reason well.

79 million Americans are mentally handicapped.

Unfortunately,

when you mix low IQ with democracy, you create chaos.

Chaos is the reason America has

- Stupid schools, a
- Stupid government, and a
- Stupid medical system.

We know our schools are stupid because every year, every state gives **Assessment Tests** that tell us, No child in America is in the right grade.

We know our government is stupid because In 2003, Arnold, Larry, and Gary wanted to be governor of California. **None** of these men had any training to manage our largest state.

- We know our medical system is stupid; not only because the
- ✓ **World Health Organization** tells us it's stupid; not only because
  - ✓ It forces people to go **Doctor Shopping**; but also, because
  - ✓ No one checks these doctors for **Competency** and **Integrity**.

Going to a doctor is like going to a **Used Car Lot**, as you will see in the following pages.

So, what can we do about this Chaos?

Well, we could start by creating good government. Simply,

1. identify all the **Skills** needed to manage government. Then,
2. arrange these skills into a **Course of Study**. Then,
3. build a **school** to teach this Course of Study. Then, graduate students with a
4. **Master's Degree in Government Management**. Then,
5. test these managers with **The American Civil Service Exam**. Then,
6. Let our **best** managers fix our schools, government, and medical system

People, who have these Mites, have 3 strikes against them:

- Strike One: They got the mites.
- Strike Two: They got the stigma of being psychotic.
- Strike Three: They got a medical system that won't help them.

Does this make sense? You can see a doctor from 8 A.M. to 5 P.M., Monday thru Friday, but not on weekends, holidays, vacations, lunch hour, 5 P.M. to 8 A.M., without an appointment.

## The Old Man

An old man went to the university medical center and complained that he was being bitten by Mites. Two doctors examined him, saw nothing, and suggested his problem was neurological. The old man insisted it was Mites.

Unfortunately, this was #9 in the Psychiatrist's Manual:

**"Patient refuses to believe it could be something else".**

And, when the old man told them they needed microscopes to examine him, the doctors became rude and fixated on Delusions of Parasitosis.

Realizing it was useless to talk with them anymore, he began dressing to go home. As the Intern walked out the door, he turned and said,

"You're a classic example of a Psychotic!"

The next day, the old man wrote a letter to the head of the department and complained about his treatment. He ended his letter with the words,

"Please help me. I'm 75 years old. This is a terrible way to end my life."

In a few days, he received a Certified Letter from the department head and the director of the physicians group, accusing him of **Abusive Phone Calls** and **Disruptive Behavior** and banning him from the physicians group, which effectively banned him from the university medical center.

The old man wrote another letter, stating the accusations were not true. And, he wanted a hearing before the board of physicians.

Four days later, he received another Certified Letter which declined to remove the Ban and ignored his request for a hearing.

So, the old man called the CEO of the physicians group and complained to him. The CEO, in disbelief, asked, Why would his doctors do such a thing? The old man replied, I really don't know. Perhaps, malpractice could be a reason because they're dermatologists, not psychiatrists.

The CEO then agreed to lift the ban, except, on the department of dermatology. The old man agreed.

We all know, the CEO should have launched an investigation, terminated the **Department Head** and the **Physicians Group Director**, and reprimanded the two doctors. But, he didn't. Why ? !

The old man is important to this book because he made me realize that something's wrong with our Medical System. So, I included some of his stories.

\*\*\*\*\*

Years ago, his dentist discovered a dead tooth and sent him to an endodontist. The endodontist told him the tooth was cracked. What did he want to do? The old man didn't know. So, he asked the Endo. The Endo said, "It's up to you." Not knowing what to do, and wanting to save his tooth, the old man consented.

Several weeks later, he had stomach cramps and nausea. So, he went to the Internet and found that Root Canals can leak bacteria and make you very sick.

Well, his tooth had a crack. It definitely had a leak. So, he went to an Oral Surgeon and had the tooth removed. But, the tooth broke along the crack, and the surgeon had to cut the tooth out.

His cramps and nausea went away. But, the question is, Why didn't the Endo or any of the dentists tell him not to have a root canal on a cracked tooth?

\*\*\*\*\*

For 4 years, the old man had acid in his lungs. He went to 42 doctors. The 36<sup>th</sup> doctor said it was Acid Reflux. The 42<sup>nd</sup> doctor said a hiatal hernia was causing it.

The 28<sup>th</sup> doctor at a university medical center said that a CAT scan found a spot behind his breast bone. He told the old man that he should do surgery immediately to see what it was. He wanted to split the old man's chest open to look for a spot.

The old man declined, went to the Internet, found a radiologist, and asked him what to do. The radiologist said, do 3, 6, 12, forget it. That meant he should have CAT scans at 3 months, 6, and 12. If the spot didn't get larger, forget it.

The old man did what the radiologist suggested. That was 15 years ago.

\*\*\*\*\*

The old man had a high PSA score. So, the specialist said he needed 12 biopsies of his Prostate. The old man said he wanted to think about it. The doctor became threatening and warned him that, If the cancer got into his blood stream, there would be no cure. But, the old man remained steadfast. That night, he saw on the Internet that, you don't do the Digital Examine before the blood test because it will raise the PSA score. So, he went back and asked for another blood test. This time, his PSA was normal. This doctor could have severely damaged the old man.

All of these doctors were either incompetent or crooks.

The National Board of Medical Experts would revoke their licenses.

There are other stories, but his last is tragic.

When he was a young man and a father, he had the cutest, healthiest, strongest baby boy. The young father couldn't wait to come home from work and play with his son. When he walked in the door, the little boy raised his head from the crib and began laughing and waving his arms and legs, until the father and mother picked him up and danced with him around the living room.

One day, the little boy became sick with a bacteria and a high fever. The mother took him to the doctor. The doctor said it was a virus. There was nothing he could do. So, the mother went home.

But, the baby did not recover. His fever became worse. She took him to another doctor in another town, who put the boy in the town hospital. This doctor said the condition was serious and recommended they take the boy to the nearby university hospital.

Then, the father came from work and saw his son. The little boy kept looking into his father's eyes, waiting to be picked up. But, he was very weak and lay still. The father didn't know what to do.

The father and mother followed the ambulance to the university hospital.

While they were sitting in the Waiting Room, a doctor came to them and requested a spinal tap. The father and mother trusted the doctor and signed their consent.

In a while, the doctor returned and said their son was gone. The father went to the nursery and saw his beautiful son, dressed in blue, lying still, forever.

He went home that night and burned the crib that he made for his son.

The viewing was in their home, but he never looked in the casket. Nor, did he want anyone to take pictures. He only wanted to remember his son the way he was, when he came home from work and saw the little boy laughing and waiting to be picked up and dance.

Years later, his wife told him that none of the doctors offered an antibiotic which would have saved their little boy's life.

*Loved and remembered, every day.*

## **WORLD FAMOUS CLINIC REFUSES TREATMENT**

Today at 11:25 AM,  
America's foremost medical clinic refused to treat a man who told them he was being bitten by Mites. He told them that Mites had gotten into his eyes and ears and were destroying his vision and hearing.

The representative for the Clinic, after conferring with administration and doctors, told him that the clinic did not treat Mites and hung up.

Remember,

This man is an American, and this is America's foremost medical clinic.

The man told them 3 diseases, Mites, Vision, and Hearing.

And, they didn't even **TRY** to help him.

They didn't even use their vast resources to find a doctor for him.

The question is, if this world famous clinic won't help him, who will?

Of course, you now know the answer. No one will help him.

No one will help him because no one believes these Mites exist.

That's why they didn't say, We are sorry for your suffering.

That's why they didn't say, Goodbye.

They knew they were talking to a man who was delusional.

So, they just hung up.

### **Symptoms**

Stabbing needle-like pain; then, burrowing the needle into the skin.

### **Diagnosis**

A species of Mite

### **Treatment**

None

However, recently,  
dermatologists use **veterinarian** drugs to kill Mites that cause Rosacea.

What?! Veterinarian drugs?! This is not Technology. It's desperation.

They don't know what they're doing. They have no labs. So, they copy.

The IQ of a dermatologist is 110 to 120. A Rocket Scientist is 140 to 190.

Now, can you see the problem?

## **WORLD FAMOUS CLINIC RETURNS DONATION**

Today, at 1:45 PM,

America's foremost medical clinic returned a large donation for research on  
**Microscopic Biting Mites**

Neither the **Administrator** for the Department of Research nor  
the Research **Supervisor** gave a reason for their decision.

Never, in the history of medical philanthropy,  
has anyone returned a donation.

This amazing story began in February, 2015,  
when the clinic sent letters, asking for donations to medical research.  
So, the donor, of this story, sent a check and an offer to pay all the cost of  
**Microscopic Biting Mites Research**

Now, that we know these Mites exist,  
doctors, scientists, and psychiatrists, who call these people psychotic,  
will be sued for malpractice, slander, libel, and defamation.

## **7 SIGNS A DOCTOR WILL BE SUED**

1. Doctor looks at patient and says, "I don't see no bugs. You're psychotic."
2. Doctor examines patient without a microscope and says, "You're psychotic."
3. Doctor examines patient without a Lab Report and says, "You're psychotic."
4. Doctor is a backward, disconnected, smug, indifferent, left brainer.
5. Doctors 1, 2, 3, and 4 write in their medical notes, "Patient is psychotic."
6. Doctors 1, 2, 3, and 4 write in a medical journal, "These people are psychotic."
7. Doctor thinks he's Sigmund Freud, talks with Lassie, and loves to play "Fetch".

## NIH REJECTS MAN WITH BITING MITES

Today, at 4:20 PM,

The **National Institute for Health** sent a Letter of Rejection to a man who told them he was being bitten by

### **Microscopic Biting Mites**

The director of research wrote that the disease did not fit their program.

Of course, the whole thing is a joke because the National Institute of Health (NIH) was created in 1953

And, 60 years later, they created the

### *Undiagnosed Disease Program*

to help people who are *forced*, by our backward medical system, to go

### **Doctor Shopping**

The joke is

- It took the NIH 60 years to realize they needed to help these people.
- 99% of the doctors never heard of the program.
- The program can pick whomever they want to examine. And,
- The program only accepts 50 – 100 people a year.... (bad joke)

To repeat, our Medical System is smug, indifferent, backward, disconnected, desperate, and expensive.

We need a **National Medical Research Center (NMRC)**,

to help everyone, around the clock, every day.

Perhaps, you might like to know what Health Care would be like, if it were

### **Rationalized and Integrated.**

Well, the

- **NMRC** will replace county, state, and federal health departments with local, 24 hour, walk-in Hospital Clinics, staffed by scientists, who treat everything.
- **The National Board of Medical Experts** set fair prices for drugs, tests, procedures, hospitals, research, as well as, assure competency and integrity.
- The efficiency, convenience, and low cost of Health Care eliminate doctors, drug stores, labs, insurance companies, and “doctor shopping”.

Once again, our Medical **Technology** is awesome. But, our Medical **System** is  
**Smug and Indifferent**

No one checks these doctors for competency and integrity.

Like, the doctor who ruptured the amniotic sac on a pregnant mother because he had a dinner engagement. He could have killed the mother and baby because the mother wasn't ready. The baby's heart rate went over 200. After an hour of frantic pushing on the mother's stomach, the nurses delivered the baby.

This doctor should have been reported. But, to who?

America has no one to report anything to, except,  
A flock of lawyers who tell us, "If you don't win, you don't pay, etc, etc, etc."

### **Backward and Disconnected**

because no one forces doctors to upgrade or collaborate with each other.

As a result, no one is connected to anything.

Doctors can go to the **NIH** and say,

"I have a tough case. Where can I send this patient?"

The **NIH** won't know.

So, the patient walks out the door and goes "Doctor Shopping".

### **Desperate**

because it forces people to use *Alternative Medicine*.

Some of these treatments are dangerous. All are a waste of time and money.

We need a National Medical Research Center to help people, around the clock.

### **Expensive**

because \$10,000 to \$30,000 for a 1 hour appendectomy is expensive.

This is only one of many, many procedures that are grossly expensive.

Indeed, our medical system has the same problem as our system of government.

It believes that Votes and money can cure our problems. But, this is not true.

Voting, in a **democracy**, causes chaos. And, easy money attracts parasites.

So, to fix our medical system, the **NMRC** creates a Web Page that lists doctors, the diseases they treat, the success of their treatment, and the cost.

It also lists

**Patient** ratings and comments, as well as, **NBME** ratings and comments.

This constant evaluation by patients and experts creates a system that is unselfish, caring, intelligent, united, confident, and inexpensive,  
a medical system that is Rationalized and Integrated

We have mastered the laws of physics, chemistry, and mathematics.

We have the power to control the universe, and live forever.

But, we must get rid of the parasites, who are destroying our civilization.

## DELUSIONS OF PARASITOSIS IS FRAUD

Today, at 10:30 PM,  
we saw on the Internet that, for 80 years, our medical system had only **one** research that examined people's skin for Delusions of Parasitosis.

In 2001-2007, a famous clinic used *skin scraping* to examine 106 patients.  
They found nothing and concluded the people were psychotic.

What?!

People pleading for help, and our medical system gives us  
1 research, 106 patients, 80 years, and *skin scraping*?  
How dumb do they think we are?! This ain't research. It's fraud.

The clinic needed to do something, but didn't want to spend the money.  
So, they made the patient's insurance pay for their research.

Besides, everyone knows *skin scraping* is **Junk Science**.  
Even the numbers are junk: 6 years, 168 patients is not a statistical sample  
We called the clinic's laboratory and talked to their technician.

She told us that skin scraping is not good because  
it cuts the animal into pieces and makes it difficult to identify.

We called a veterinarian, who also said skin scraping is junk.  
In fact, it can only identify 20% of the samples.

We hired specialists to search the web for doctors who use microscopes to  
examine people. They found nothing.

In other words, when you go to a doctor and they can't see the bugs,  
they call you, psychotic. But, they have no scientific proof. They're lying.

That's fraud.

At the Doctor's Office

Patient: Ya gotta help me, doc. I'm being bitten by microscopic bugs.

Doctor: I don't see no bugs.

Patient: Ya can't see em, doc, they're microscopic. You need a microscope.

Doctor: I ain't got no microscope.

Patient: Well, send me to a doctor who does

Doctor: I don't know no doctors whose got a microscope.

Patient: Well, send me to the county, state, or federal health departments.

Doctor: They don't examine people. And, they don't know no doctors who do.

Patient: Well, send me to America's best clinic.

Doctor: They don't examine people with bugs. They think your goofy.

Patient: Last question, Is this America or a Banana Republic? Hasta la Vista, doc.

If good health is the most important thing in our life, then,  
Why do we have a backward medical system?

Well,

Government creates medical systems, as well as,  
schools, highways, post offices, airports, and armies.

Therefore,

If we have good government, we will have a good medical system.

But,

We do not have good government because  
Our leaders had no training for the job and don't know what they're doing.

Also,

If our leaders want something, they have to ask Congress for it.

But,

Congress don't know what they're doing, either, because  
they had no training for the job.

Now,

Can you begin to see why we have a backward medical system?

and

Why on Page 12, we had to ask Congress for help?

So,

What do we do?

Well, we

**HIRE THE BEST**

And, we can **hire** the best by following the instructions on Page 17.

Once again,

Good health is the most important thing in our life, and  
Good government is the most important thing in the life of our country.

America has neither.

In fact, we are near collapse.

Congress wasted our money on wars and handouts.

God help us all.

## **AUTHOR CURES HIMSELF OF CANCER**

Today, at 3:35 PM,

The author of this book received a phone call from his doctor, telling him that the cancer on his left arm was gone.

This amazing story began when a dermatologist told him that the lump on his arm was cancer.

So, the doctor took a biopsy and wanted to remove the lump.

But, Erik said, "I know how to cure it. I want to wait 2 weeks."

The dermatologist warned him that it was serious.

Several days later,

the doctor called and told him that the biopsy reported cancer, and that he should come to the office and have it removed, immediately.

Erik continued his treatment at home.

2 weeks later, he received a *Certified Letter* from the doctor's office, telling him to setup an appointment and have the lump removed.

Erik waited 2 more weeks, then made an appointment.

The doctor was amazed to see the lump was gone.

Nevertheless, he took a second biopsy.

The phone call, today, was the report from the second biopsy.

The boxes below show the results of the 2 biopsies. Cicatrix means the cancer is gone.

<b><u>Biopsy 1 Diagnosis:</u></b>	<b><u>Biopsy 2 Diagnosis:</u></b>
Left Arm-	Left Arm-
<b>SQUAMOUS CELL CARCINOMA, INVASIVE</b>	<b>CICATIRX</b>

## New children's book declares war on Mites

In this book, Mr. Erik Raichle tells us that  
We got rid of mosquitoes and malaria;  
We can and must get rid of Mites and Asthma.  
So, Mr. Raichle wrote this book to tell us what we can do.

An illustration of a young boy in a blue and black striped shirt, seen from behind, aiming a black handgun. He is firing at a large, multi-eyed, insect-like creature (a mite) that is breathing fire. The mite is positioned on a wooden cart or table. The background is a dark, stormy sky with lightning bolts striking down. The overall scene is one of intense action and conflict.
